

# Infosec Programme Implementation

Covering everything, from the ICO's increased Data Protection Act enforcement powers to the new Computer Misuse and Companies Acts, the Payment Card Data Security (PCI DSS), Sarbanes Oxley and the Financial Services Authority; information security and risk management is a board-level responsibility that all businesses need to consider.

Are you struggling to keep on top of the ever increasing compliance landscape? Are your customers driving you to show demonstrable security?

Our InfoSec Programme Implementation service gives you all the skills and tools necessary to take your business through the challenges and pitfalls of compliance, reducing risk throughout your business.

Pasporte InfoSec specialists use proven methodologies and cost-effective and pragmatic controls to ensure your most efficient path to compliance.

We will liaise with all affected business areas including organisational, policy, HR, legal and IT and once compliant, we'll help you stay that way, liaising with the governing bodies and helping to reduce the pressure from regulators with progress updates and expected roadmaps.

We can design, direct and manage business-wide compliance activities and projects in order to meet formal information security mandates. By adopting a risk-based approach (as opposed to control-based), you are better prepared for future compliance standards.

#### Typical service elements:

- Data Protection Act 1998
- Payment Card Industry Data Security Standard (PCI DSS)
- International standard for information security management
- IEC/ISO 27001
- HM Government Gsi Code of Connection
- Sarbanes Oxley Act 2002 (SOX 404) (USA)
- Financial Services Authority (FSA)
